**ABSTRACT**

The goal of the National Education Policy 2020 (NEP 2020) is to provide all Indian children with access to a high-quality education that will aid in the country's long-term transition towards a more equitable and intellectually vibrant society. This article compares and contrasts two versions of current education policy: the New Education Policy from 1986 and the New Education Policy from 2020. It was also sought out what was wrong with the previous policy that prompted the development of NEP 2020. The key features of NEP 2020 have also been discussed briefly. Journals, reports, print media, and several government websites all contributed to the compilation of this data. Based on the results of this poll, we can safely say that most people have below-average levels of consciousness. He uses factors such as gender, geography, institution type, years of service, and family composition to ascertain levels of awareness.
